

## MVC Architecture Diagram

### Model

- Data stored in database
- Travel locations
- Attractions at each location
- Hobbies for hobby choice selection
- Seasons for travel season selection
- Common budgets for travel to different locations

### View

- Simple design with minimal elements
- Simple design will reduce confusion and increase the user's ability to understand what to do next
- Easy to use due to simple design and reduced numbers of complex features

### Controller

- Basic and common features to increase ease of use
  - User's will know what to do with the features as they should have seen the elements before
- Preference input will be done through buttons or drop-down menu selection
- Possible use of google map widget to allow user to interact with map of recommended travel location
